Prepared 17-08-2026

ESTIMATED MONTHLY

-

PROJECTED ANNUAL (x12)

-

Field	Details
Region	As stated per resource
Environments	Production 24h/day, Staging 12h/day, Dev 8h/day
Line items	5
Live estimate	https://calculator.aws/#/estimate?id=32c8820cdf8cf84e3a422575b4a8b17c59526446

Cost by environment

Environment	Hours/day	Monthly	Annual (x12)	Share
Production	24h	-	-	-
Staging	12h	-	-	-
Dev	8h	-	-	-

Detailed breakdown

Production

Service	Configuration	Hours/day	Monthly	Annual
Amazon EC2	t3.large x2, Linux, shared tenancy, EC2 Instance Savings Plan (1yr, No Upfront), 100% utilization	24h	-	-
Amazon RDS for PostgreSQL	db.t3.medium, Multi-AZ, On-Demand, gp3 storage 100GB, 100% utilization	24h	-	-
Amazon S3 Standard	200 GB Standard storage	usage	-	-

Staging

Service	Configuration	Hours/day	Monthly	Annual
Amazon EC2	t3.medium x1, Linux, shared tenancy, On-Demand, 50% utilization (12h/day)	12h	-	-

Service	Configuration	Hours/day	Monthly	Annual
Amazon EC2	t3.small x2, Linux, shared tenancy, On-Demand, 33.33% utilization (8h/day)	8h	-	-

Annual figures are the monthly cost multiplied by 12. They are a projection for budgeting, not a quoted annual price, and they assume the configuration does not change.

Assumptions and exclusions

Chosen on your behalf where the requirement did not say:

#	Assumption
1	Region ap-south-1 (Mumbai) used as specified for all resources.
2	Production EC2 web tier priced with EC2 Instance Savings Plan (1 Year, No Upfront) since it runs 24/7 steady-state; Staging and Dev EC2 priced On-Demand since they run partial hours/day and are not steady-state.
3	RDS PostgreSQL priced On-Demand (Multi-AZ) with 100 GB gp3 storage as no storage size was specified in the sheet.
4	S3 row is usage-based storage; runtime hours do not apply to it, so no utilization field was set.
5	RDS row 2 utilization left at 100% since the sheet states 24 hours/day for Production and RDS On-Demand utilization field represents percent of month running.
6	Staging EC2 utilization set to 50% (12/24 hours) and Dev EC2 utilization set to 33.33% (8/24 hours) via the top-level utilization field to reflect partial-day runtime.
7	EC2 OS assumed Linux for all instances; no OS was specified in the sheet.
8	Data transfer for EC2 instances left at 0 (not specified in the sheet).

Raised while building the estimate:

#	Warning
1	import_estimate returned no AWS-calculated pricing figures (monthlyTotal and all line-item costs) for this estimate - the calculator.aws JSON/markdown export did not include computed dollar amounts, so all monetary fields are null. The shareable URL can be opened in a browser to see AWS's live calculated pricing.

This estimate excludes:

- Data transfer beyond what was specified above, including inter-region and internet egress.
- AWS Support plans, Marketplace software, and third-party licensing.
- Taxes, and any private pricing or Enterprise Discount Program terms on your account.
- One-off migration, professional services, and engineering effort.

AWS recalculates live pricing when the estimate link is opened, so the figures here are correct as at 17-08-2026 and may move with published price changes. Open the estimate and press "Update estimate" to refresh it.
